SCHEMA

Schema keeps the story behind your photos

A private journal for the details a photo misses. You write the notes. We add event facts from the event's own page, and you approve each one.

M 001 · OCTOBER — Illustrative example

The courtyard gig

"I almost skipped this night."

Your note (1)

Public context (2) · Waiting for your approval

Team LineOfCode · Delhi Technological University

Kritical Hacks 2026 · AI/ML Student Track

A photo keeps the scene. The details walk away.

WHAT A PHOTO CANNOT HOLD

A stranger arguing outside the gate

A kid who smiled when you gave ₹50

Who was there, and why it mattered

One photo. A few words.

WHO IT IS FOR

Adults aged 18–30 who photograph their days and want to keep the story privately.

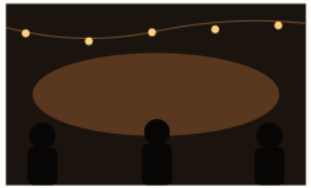

WHY WE ARE BUILDING THIS

Photos help us remember where we were. Our own words preserve why a day mattered. Schema brings them together in pages we can return to.

Expected benefit: easier capture and meaningful revisits. A 20-person adult pilot will test both.

One page holds your memory and where each fact came from

THE COURTYARD GIG · ILLUSTRATIVE EXAMPLE

YOUR NOTE (1)

With Dev and Sana. The guard and a stranger argued at the gate all night.

PUBLIC CONTEXT (2)

Courtyard stage · Sat 10 Oct

From the event page you linked. We keep the source and the time.

Confirmed by you

1 **Add photos and write what you would forget**

Your words keep the personal part of the story.

2 **Paste a public event link**

TinyFish finds the title, date, venue and program.

3 **Check each fact, then save**

Only selected facts enter your editable draft.

Later: revisit pages by year, person or place.

TinyFish reads the event page. You approve what it finds.

1. Public event link

One URL, supplied by you.

2. Browser agent

Reads event details and schedule sections.

3. Proposed facts

Title, dates, venue, program and source.

4. Reviewed draft

You select facts before saving.

A REAL PROVIDER TEST

PyCon US 2026

13–19 May 2026
Long Beach Convention Center
Tutorials, keynotes and AI track

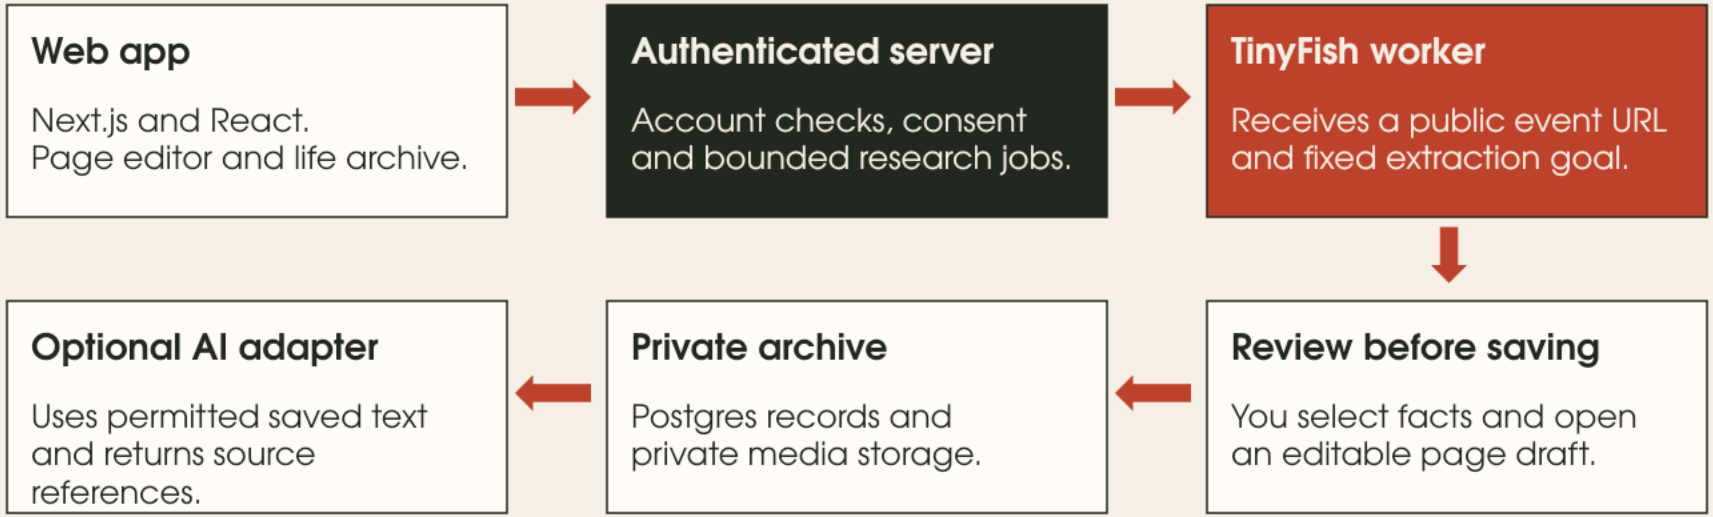

WHY THE AGENT IS USEFUL

Program details can sit behind navigation and interactive sections. The agent can follow those paths and return structured candidates for review.

The live provider test completed in 5 steps. The app adapter has a 12-step cap and server-side credentials.

Private notes and photos stay outside TinyFish. Selected facts keep their source link and retrieval time.

Private pages and public web research have separate paths

Technical approach: async TinyFish jobs, signed account tokens, explicit fact selection and private account storage.

Current AI retrieval uses bounded keyword matching. Semantic memory threads and native mobile apps remain future work.

What a ₹149 subscription has to cover

₹149

proposed monthly price

₹27

typical variable cost

₹96

contribution before free users and shared fixed costs

Monthly service cost (₹)	Typical use	Full allowance
Storage + delivery	5.97	17.69
AI answers	6.00	15.00
TinyFish research	8.64	17.28
Processing + support	6.00	7.00
Total variable cost	26.61	56.97

Typical: 1 GB stored, 20 AI answers, one 6-step research run. Step price $0.016. Planning FX ₹90/USD.

Net receipts ≈ ₹123 after illustrative tax/fees. Free accounts and fixed costs still need funding. Model and sources accompany the deck.

How we reach people, keep them, and earn from it

REACH

Start with an opt-in pilot of 20 adult DTU students. Measure capture and revisits before expanding.

REASON TO RETURN

Make a quick page now. Return to the people, places and words that connect your days.

REVENUE

A capped subscription funds storage and AI. Extra research packs follow measured costs.

PROPOSED COMMERCIAL PLANS

	Free	Plus
Price / month	₹0	₹149
Media allowance	250 MB	5 GB
AI answers / month	5	50
Research / month	Trial only	1 capped run

These are pricing hypotheses. Current restricted demo quotas differ. Existing pages stay readable after downgrade.

Alternatives: Day One Silver $49.99/year, Gold $74.99/year. Journey $4.17/month billed annually. Schema tests crafted pages with reviewed event context.

Prototype and future scope

IN THE PROTOTYPE

Journal pages
Photos, personal notes and a life archive

Public event research
TinyFish reads the event website

Review before saving
Only approved facts enter the draft

Source provenance
Event links and retrieval time stay visible

CURRENT EVIDENCE

86 automated tests passing
Customer build and type checks pass

5 steps in a live TinyFish provider test
Recorded result included in the repository

NEXT BUILD

Pilot with 20 adult users. Improve memory retrieval, then evaluate voice and selected media imports.

Longer term: native mobile pages, confirmed memory threads and carefully scoped shared albums.

Team LineOfCode · DTU
